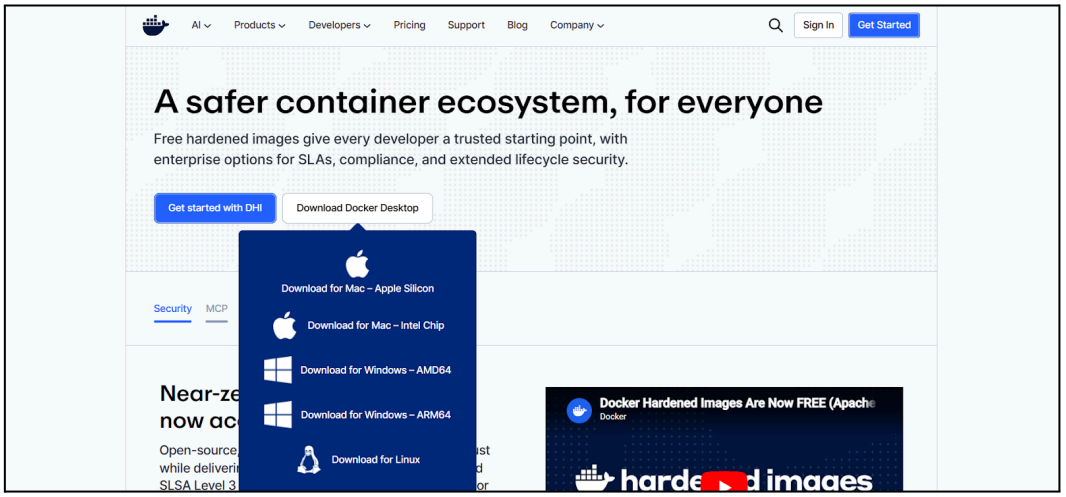
Download Docker

1. Visit official page of docker: https://www.docker.com/

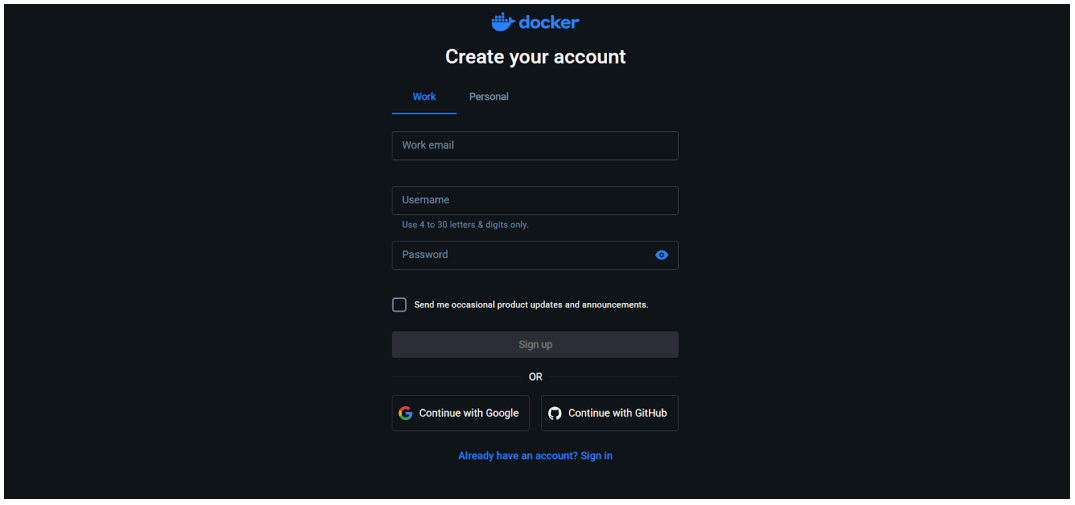
2. Interface would be as below image:



3. Download the appropriate docker application as per your system specifications.

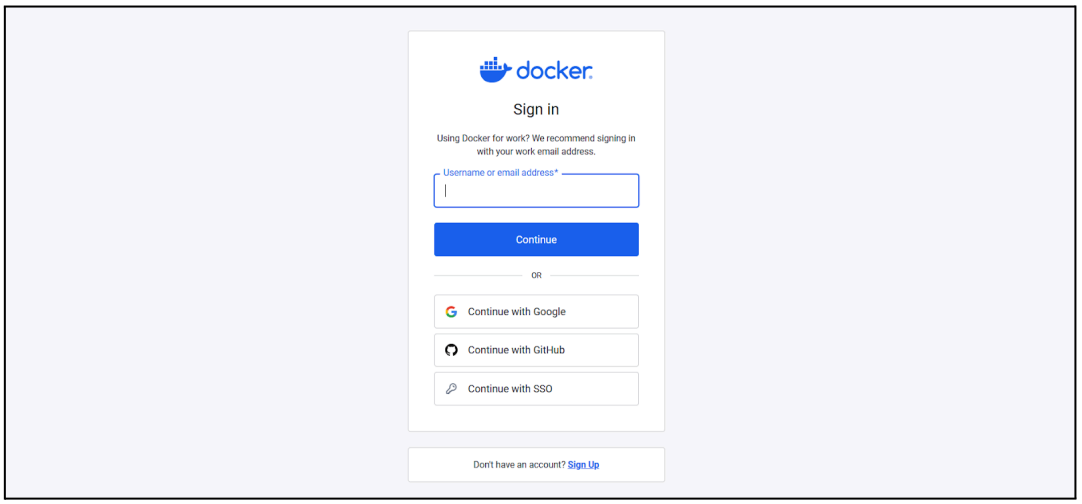
4. Once downloaded, install the docker application. The system might restart after the installation.

5. Open the docker application and Signup



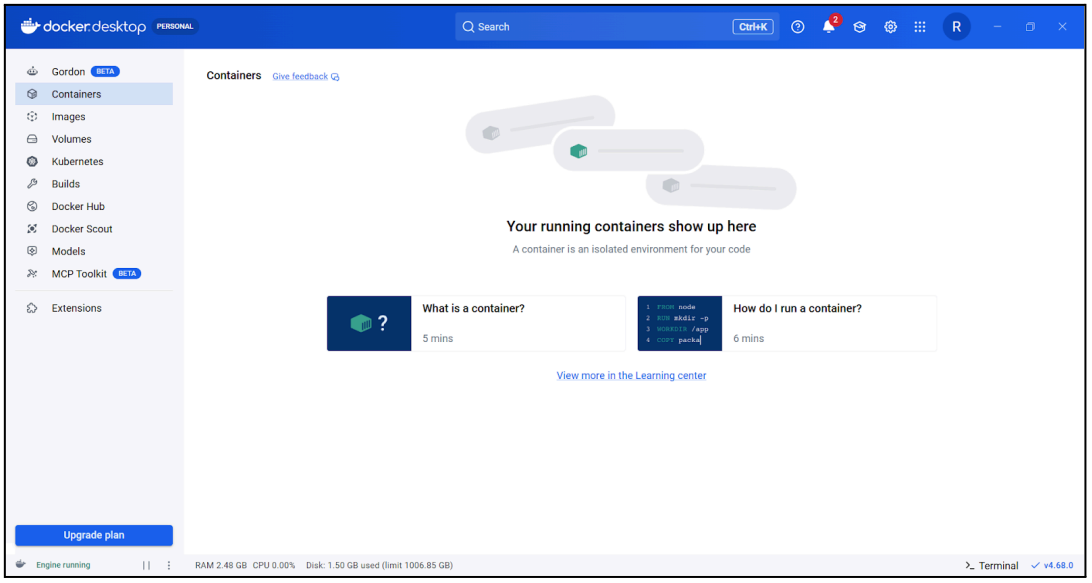
6. The application might ask for some additional information. Fill the information or just skip it for now

7. Next step is to Login into your docker application



8. You might need to update Windows Subsystem for Linux (WSL)
    - Open Powershell — Run as administrator
    - Use command: wsl --update

9. Refresh/Restart. Your Docker Desktop interface should look like as below



10. Now we need to check if Docker was properly installed or not and is it functional
    - Open Command Prompt
    - Write command: docker or docker -v

```
Microsoft Windows [Version 10.0.22631.6199]
(c) Microsoft Corporation. All rights reserved.

C:\Users\hp>docker
Usage:  docker [OPTIONS] COMMAND

A self-sufficient runtime for containers

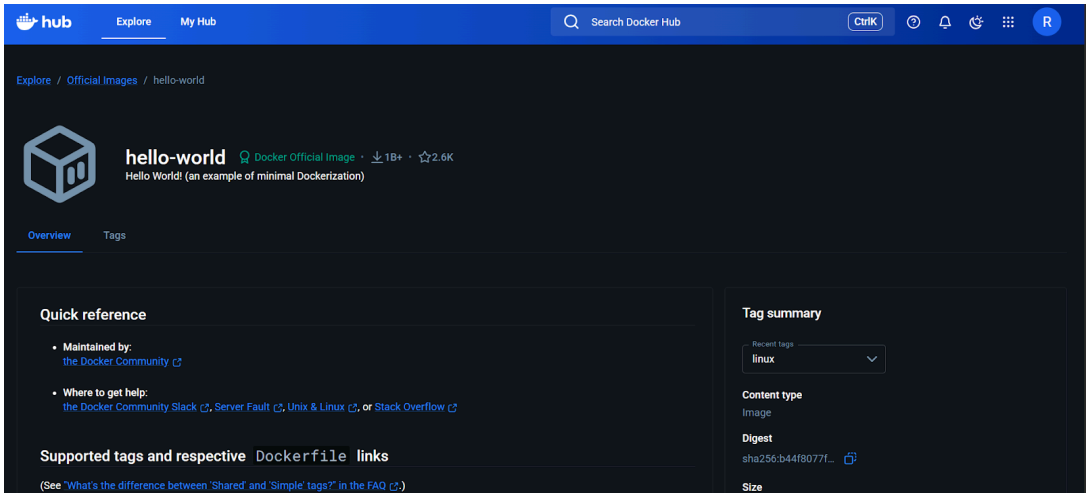
Common Commands:
  run         Create and run a new container from an image
  exec        Execute a command in a running container
  ps          List containers
  build       Build an image from a Dockerfile
  bake        Build from a file
  pull        Download an image from a registry
  push        Upload an image to a registry
  images      List images
  login       Authenticate to a registry
  logout      Log out from a registry
  search      Search Docker Hub for images
  version     Show the Docker version information
  info        Display system-wide information

Management Commands:
  agent*      Docker AI Agent Runner
  ai*         Docker AI Agent - Ask Gordon
  builder     Manage builds
  buildx*     Docker Buildx
  compose*    Docker Compose
  container   Manage containers
  context     Manage contexts
  debug*      Get a shell into any image or container
  desktop*    Docker Desktop commands
  dhi*        CLI for managing Docker Hardened Images
  extension*  Manages Docker extensions
  image       Manage images
  init*       Creates Docker-related starter files for your project
  manifest    Manage Docker image manifests and manifest lists
  mcp*        Docker MCP Plugin
  model*      Docker Model Runner
  network     Manage networks
```

Check out Docker Hub.

11. Visit Docker Hub: https://hub.docker.com/

12. Search for image Hello World:



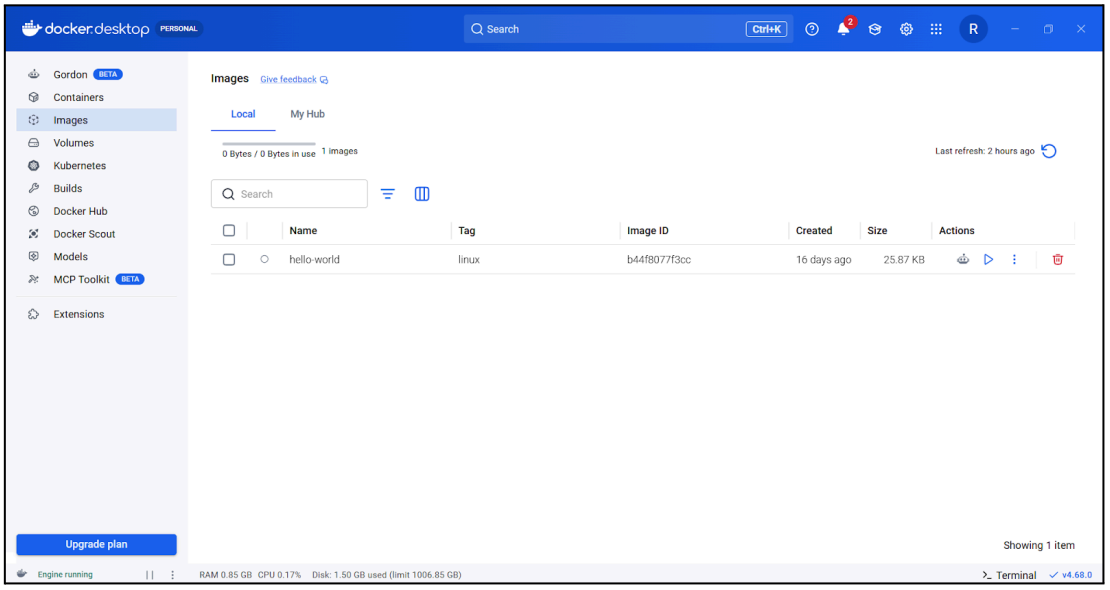
13. Copy the command of Pull Hello World Docker Image and paste in cmd

```
Microsoft Windows [Version 10.0.22631.6199]
(c) Microsoft Corporation. All rights reserved.

C:\Users\hp>docker pull hello-world:linux
linux: Pulling from library/hello-world
4f55086f7dd0: Pull complete
d5e71e642bf5: Download complete
Digest: sha256:b44f8077f3cc983f21adf071c813599ff805af75196a456a326253c7b3357c48
Status: Downloaded newer image for hello-world:linux
docker.io/library/hello-world:linux

C:\Users\hp>
```

14. Hello world image in docker desktop



- Tags are usually version
- It automatically gets an unique id
- Check size: Very small — Thus its docker is lightweight

15. Run the docker image and build container

```
d5e71e642bf5: Download complete
Digest: sha256:b44f8077f3cc983f21adf071c813599ff805af75196a456a326253c7b3357c48
Status: Downloaded newer image for hello-world:linux
docker.io/library/hello-world:linux

C:\Users\hp>docker run hello-world:linux

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
 1. The Docker client contacted the Docker daemon.
 2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
    (amd64)
 3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it
    to your terminal.

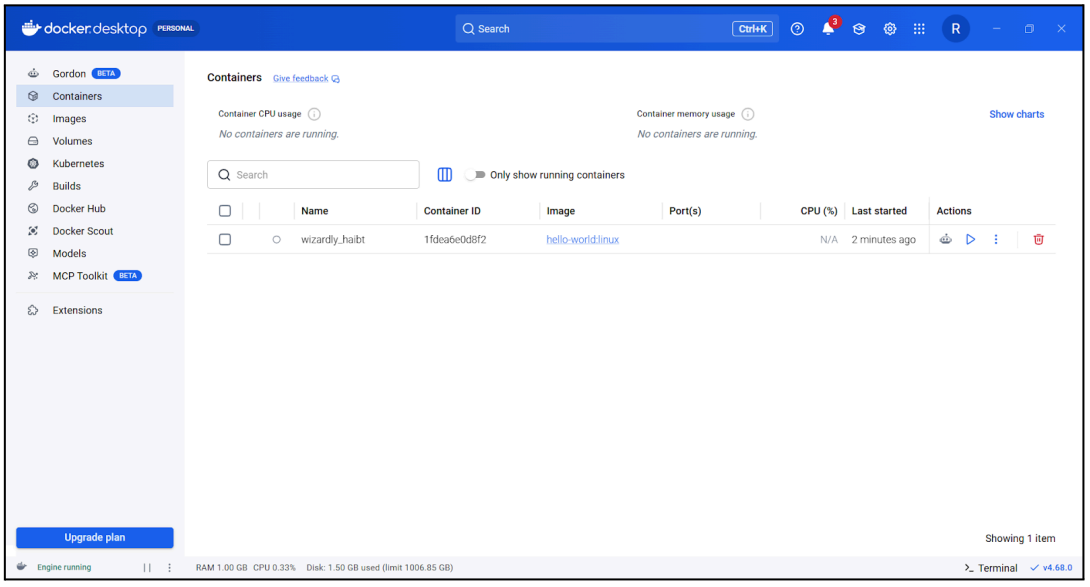
To try something more ambitious, you can run an Ubuntu container with:
 $ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
 https://hub.docker.com/

For more examples and ideas, visit:
 https://docs.docker.com/get-started/

C:\Users\hp>
```

16. Check the containers tab in docker desktop



- Container gets an ID and its state is mentioned
